PROFILE

Digital Marketing and Advertising student with an interest in Artificial Intelligence, workflow automation and research.

I am interested in applying AI to practical problems and streamlining repetitive tasks. I have hands-on experience developing personal projects with n8n, Docker, Google Gemini and Google Sheets, along with knowledge of digital marketing, web research and information organization.

I am looking for remote opportunities where I can keep learning, contribute practical solutions and gain experience working on real projects.

FEATURED PROJECT

Job Analyzer AI · Personal Project · 2026

An automation project built to streamline a repetitive task related to finding and evaluating remote job opportunities.

- Designed a workflow to collect and process job alerts.
- Used n8n to connect and automate the different stages of the process.
- Integrated Google Gemini to analyze opportunities based on defined criteria.
- Organized the results in Google Sheets for easier review.
- Used Docker to set up and run the local environment.
- Used AI-assisted development (Vibe Coding) while building and improving the project.

Tools: n8n · Docker · Google Gemini · Google Sheets · AI-assisted development
